API Workflow:

1. To see the documentation Visit https://www.pruuvntst.app/api-docs/index.html Then from the right side, you will find "Select a definition", select API V3 there.
2. To authorise on this page, click on "Authorise" button on the left and then you will need 4 details as mentioned below.
   a. Username - Your Pruvvn email
   b. Password - Your Pruuvn password
   c. Client_id - H8NohkqXmM2ne3GebCsFtotlFN_HQMi0NRgDVbsXJ24 (use this test creds)
   d. Client_secret - tkQd_DMkc0P3E1VF-AH-smxqUFtrtt8sc0YXLmIM_Uc (use this test cres)

3. Once you get authorised, you can access and test any of the APIs. But make sure you have sufficient sample data available on your account to test this.

General Authentication for all requests:

To login with a user from POSTMAN like an API access tool,

REST URL: https://pruuvntst.app/api/v1/login
METHOD: POST
REQUEST BODY:
{
  "email": "YOUR USER EMAIL",
  "password": "YOUR PASSWORD"
}
RESPONSE BODY:

{ "access_token":"RANDOM STRING WITH CHARACTERS AND DIGITS",
  "token_type":"Bearer",
  "Expires_in":14400,
  "Refresh_token": "<RANDOM TOKEN USE FOR REFRESH TOKEN>",
  "Created_at":1654515399,
  "User_id": <USER UNIQUE ID>
}

In response you will get the JWT token which you have to add as a Bearer token in the "Authorization" header for each request.
